

Why is drinking fluoridated water important?

- Fluoride is a natural element found in tap water.
- The fluoride concentration in tap water is approximately 0.1 parts per million. This concentration does not cause health problems.
- Studies have shown that water fluoridation could decrease up to 60% the risk of dental caries in children.
- Drinking fluoridated water could save you dental treatment expenses.
- One Brita filter could substitute up to 300 water bottles of 16.9 ounces. You can drink clean water without expending more money.
